SPECIAL

Recycling bin S200-PPE

Description: Self-supporting, straight exterior walls incl. rounded corner profiles and a cover construction made of stainless steel, fastened with a galvanized interior construction, provide great stability. The funnel-shaped openings on the top of the container guide the waste into either a bag holder (version 1) or a galvanized inner liner, which also serves as a bag holder (version 2).

Safety: The funnel-shaped opening in combination with the inner construction provides a self-extinguishing effect (TÜV-certified). The snap lock protects the container against unauthorized access.

Handling: The liners are emptied through the two large front doors, which are opened with a key. Two versions are available. In version 1, the waste bag is attached to an extendible bag holder. Version 2 has an inner liner, which is emptied by removing the liner and subsequently lifting out the bag.
