Datasheet 01.008 / Technical Information 09.2022

## TEMPTATION Single bin FFW1

**Description:** Self-supporting, curved fronts, straight back and flat side panels made of stainless steel, secured with an internal construction of galvanized steel, provide great stability. The tops funnel-shaped opening guides waste into the inner liner and is also an elementary part of the fire protection (patented and certified).

**Safety:** The galvanized inner liner is sealed by a patented system. In the event of a fire, the rising smoke gases collect below the funnel-shaped opening. The resulting gas cushion interrupts the oxygen supply and a self-extinguishing effect occurs. In addition, the construction (inner liner / outer body) minimizes the increase in temperature at, above and below the casing in the event of fire. A snap lock protects the receptacle against unauthorized access.

**Handling:** Quick and easy removal of the waste bag from above. The top part of the bin automatically swivels upwards by means of a gas spring after operating the lock (1/4 turn). The contents are now visible and the waste bag can be replaced as required.
